```

Dataset Shape: (891, 12)

Columns:

Index(['PassengerId', 'Survived', 'Pclass', 'Name', 'Sex', 'Age', 'SibSp', 'Parch', 'Ticket', 'Fare', 'Cabin', 'Embarked'], dtype='object')

Dataset Information:

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 891 entries, 0 to 890
Data columns (total 12 columns):
#   Column      Non-Null Count  Dtype
---  -
0   PassengerId  891 non-null    int64
1   Survived     891 non-null    int64
2   Pclass       891 non-null    int64
3   Name         891 non-null    object
4   Sex          891 non-null    object
5   Age          714 non-null    float64
6   SibSp        891 non-null    int64
7   Parch        891 non-null    int64
8   Ticket       891 non-null    object
9   Fare         891 non-null    float64
10  Cabin        204 non-null    object
11  Embarked     889 non-null    object
dtypes: float64(2), int64(5), object(5)
memory usage: 83.7+ KB
```

Observation

- The Titanic dataset contains passenger details such as age, gender, ticket class, fare, and survival status.
- Some columns contain missing values that will be explored later.
- The dataset includes both numerical and categorical features for analysis.

```
# Statistical summary of numerical columns
df.describe()
```

	PassengerId	Survived	Pclass	Age	SibSp	Parch	Fare	
count	891.000000	891.000000	891.000000	714.000000	891.000000	891.000000	891.000000	
mean	446.000000	0.383838	2.308642	29.699118	0.523008	0.381594	32.204208

Observation

- The statistical summary provides an overview of numerical features such as Age and Fare.
- There is noticeable variation in passenger ages and ticket fares.

```
# Check missing values
df.isnull().sum()
```

	0
PassengerId	0
Survived	0
Pclass	0
Name	0
Sex	0
Age	177
SibSp	0
Parch	0
Ticket	0
Fare	0
Cabin	687
Embarked	2

dtype: int64

Observation

- Missing values are present in Age, Cabin, and Embarked
- Cabin has the highest number of missing values.

```
print("Passenger Class")
print(df["Pclass"].value_counts())

print("\nGender")
print(df["Sex"].value_counts())

print("\nSurvival")
print(df["Survived"].value_counts())
```

```
Passenger Class
Pclass
3    491
1    216
2    184
Name: count, dtype: int64

Gender
Sex
male    577
female  314
Name: count, dtype: int64

Survival
Survived
0    549
1    342
Name: count, dtype: int64
```

Observation

- Most passengers traveled in Third Class.
- Male passengers outnumber female passengers.
- More passengers did not survive than survived.

```
plt.figure(figsize=(6,4))
sns.countplot(x='Survived', data=df)
plt.title("Survival Count")
plt.xlabel("Survived (0 = No, 1 = Yes)")
plt.ylabel("Number of Passengers")
plt.show()
```

Observation

- More passengers did not survive than survived, indicating the disaster had a high mortality rate.

```
plt.figure(figsize=(6,4))
sns.countplot(x='Sex', data=df)
plt.title("Gender Distribution")
plt.xlabel("Gender")
plt.ylabel("Count")
plt.show()
```

Observation

- The dataset contains more male passengers than female passengers.

```
plt.figure(figsize=(8,5))
sns.histplot(df['Age'], bins=30, kde=True)
plt.title("Age Distribution")
plt.xlabel("Age")
plt.ylabel("Frequency")
plt.show()
```

Observation

- Most passengers were between 20 and 40 years of age, with fewer elderly passengers.

```
plt.figure(figsize=(6,4))
sns.boxplot(x=df['Age'])
plt.title("Age Boxplot")
plt.show()
```

Observation

- The age distribution contains several outliers, representing unusually old or young passengers.

```
plt.figure(figsize=(6,4))
sns.countplot(x='Sex', hue='Survived', data=df)
plt.title("Survival by Gender")
plt.xlabel("Gender")
plt.ylabel("Number of Passengers")
plt.legend(title="Survived", labels=["No", "Yes"])
plt.show()
```

Observation

- Female passengers had a significantly higher survival rate than male passengers.

```
plt.figure(figsize=(6,4))
sns.countplot(x='Pclass', hue='Survived', data=df)
plt.title("Survival by Passenger Class")
plt.xlabel("Passenger Class")
plt.ylabel("Count")
plt.show()
```

Observation

- First-class passengers had the highest survival rate, while third-class passengers had the lowest.

```
plt.figure(figsize=(8,5))
sns.histplot(df['Fare'], bins=30, kde=True)
plt.title("Fare Distribution")
plt.xlabel("Fare")
plt.ylabel("Frequency")
plt.show()
```

Observation

- Most passengers paid lower fares, while only a few passengers paid very high ticket prices.

```
plt.figure(figsize=(8,6))

numeric_df = df.select_dtypes(include=['number'])

sns.heatmap(numeric_df.corr(), annot=True, cmap='Blues', fmt=".2f")

plt.title("Correlation Heatmap")
plt.show()
```

Observation

- Passenger class and fare show relationships with survival, while some variables have only weak correlations.

```
sns.pairplot(df[['Survived', 'Age', 'Fare', 'Pclass']].dropna(), hue='Survived')
plt.show()
```

```
plt.figure(figsize=(8,5))
sns.scatterplot(x='Age', y='Fare', hue='Survived', data=df)
plt.title("Age vs Fare")
plt.xlabel("Age")
plt.ylabel("Fare")
plt.show()
```

Observation

- Higher fares are generally associated with first-class passengers, who also had better survival rates.

Key Findings

- The dataset contains 891 passengers and 12 features.
- Missing values were found in the Age, Cabin, and Embarked columns.
- More passengers did not survive than survived.
- Female passengers had a significantly higher survival rate than males.
- First-class passengers had the highest survival rate.
